Summary

Aspiring iOS Developer and Product Builder passionate about creating impactful digital experiences using SwiftUI and modern Apple technologies. Experienced in developing health-tech, AI-powered, and food-tech solutions while actively participating in hackathons, innovation programs, and developer communities.

Achievements

- Top 17 Finalist – OpenAI Buildthon Challenge.
- Winner – NxtWave Buildathon.
- Gold Medalist – Boxing Competition.
- Built multiple SwiftUI applications focused on healthcare, productivity, and FoodTech solutions.
- Active participant in hackathons, innovation programs, and product-development initiatives.
- Active GitHub contributor with public repositories showcasing product-focused development.
- participant of Swift Student Challenge 2026

Experience

Neuroverse Software Solutions

Jan 2026 – Present

Software Developer Intern

- Contribute to UI and feature development for internal and client applications.
- Develop SwiftUI components and collaborate through Git, pull requests, and code reviews.
- Use Xcode debugging tools to diagnose and resolve application issues.

Technical Skills

Languages: Swift, Java, C++, Python, JavaScript

iOS Development: SwiftUI, UIKit, MVVM, UserNotifications, REST APIs, JSON Parsing

Apple Technologies: Foundation, AVFoundation, Core ML, Apple Intelligence, Foundation Models

Tools: Xcode, Git, GitHub, Firebase, Figma, VS Code, AI-Assisted Development Tools

Data Structures Algorithms, Object-Oriented Programming, Debugging, Version Control

Selected Projects

Medic – Personal Health Companion

GitHub

SwiftUI • MVVM • UserNotifications

- Built a healthcare application enabling symptom tracking, medicine reminders, and health record management.
- Implemented reusable SwiftUI components using MVVM architecture for maintainability and scalability.
- Designed interfaces following Apple Human Interface Guidelines and integrated local notifications.

Solace – Vitamin D Health Tracker

GitHub

SwiftUI • MVVM

- Developed a wellness application helping users track Vitamin D exposure and healthy habits.
- Implemented reminder-based workflows and intuitive state management.

Yumyoo – Smart Food Pre-Ordering Platform

GitHub

Product Design • FoodTech

- Designed a pre-order food platform reducing customer wait times through pickup-based ordering.
- Enables restaurants without websites to create digital storefronts, menus, and ordering systems.
- Focused on solving queue management challenges for customers and local businesses.

Hearly – AI Meeting Assistant [Chrome Extension]

AI Productivity • Product Design

- Designed an AI-powered productivity tool focused on improving voice clarity and reducing background noise.
- Created user experiences inspired by modern communication and collaboration platforms.

Education

Sanjay Ghodawat University (NIAT)

Kolhapur, India

B.Tech in Computer Science Engineering (2nd Semester)

Jun 2025 – Present

Course : Artificial Intelligence (AI) and Data Science (DS)

Relevant Coursework: Object-Oriented Programming, Data Structures Algorithms, Programming Fundamentals, Software Engineering
